

# InstaCradle® for superior outside decking.

The unique rubber crumb InstaCradle is ideal for use with exterior timber decking as it provides a durable, quiet, shock absorbing system.

The outside area where the decking is to be installed does not have to be an even surface as the **InstaCradle system is adjustable in height and can be levelled on site.** Combinations of **2mm and 5mm cradle packers**, with **10mm and 30mm interlocking base packers** for more difficult areas, are used to alter the cradle height and ensure that the decking surface is **completely level.**

A suitable **support batten** is simply inserted loose into the cradles and the chosen **decking material is then fixed directly to each batten** with the traditional clips and fixing brackets common in the industry. InstaCradles are made from **environmentally friendly recycled rubber crumb** and provide **excellent acoustic insulation** that isolates the impact sound, which can be really important on outside **balconies or flat roofs** where sound transmission can be an issue. The rubber cradles cause **no damage to the sub-surface**, such as flat roofs, and eliminate the creaking created by many types of plastic cradles that are used for outside decking. The cradles are also very **hard wearing, water resistant and do not become brittle in cold weather conditions.**

# BENEFITS

60

year  
guarantee

fast, easy and  
cost-effective

made from  
recycled rubber

No damage to  
existing surfaces

genuine  
'cradle-to-  
cradle' product

Fully  
recyclable

On-site floor  
levelling

long-lasting,  
high-performing

avoid the risk  
of creaking

decking boards  
can be **secret  
nailed** directly  
to battens

Excellent  
**acoustic**  
performance  
*for balconies and flat  
roof applications*

**Adjustable**  
for **varying**  
deck **heights**

1 car tyre recycled  
per 37 cradles  
**1000m<sup>2</sup> = 319 car  
tyres recycled**

1 truck tyre recycled  
per 255 cradles  
**1000m<sup>2</sup> = 46 truck  
tyres recycled**
